Fribourg profile
The doctoral programme in Psychology is an integrated approach consisting of research, academic training and interventions. It provides doctoral students with an in-depth understanding of the theoretical foundations of the chosen sub-discipline and the research methods used in this sub-discipline. Doctoral students will learn to generate innovative knowledge based on strict methodologies and work with academic research teams or local companies. The research projects take place in the University of Fribourg laboratories. Currently 30 students are trained in these laboratories and have the opportunity to take part in research seminars at the University. They are also encouraged to present their research at national and international psychology conferences. This facilitates interactions between students and experienced researchers and allows students to develop a network for collaborations and for their future employment.

Admission

In order to be admitted to a doctorate the candidate must have been awarded an academic Bachelor's and Master's degree or an equivalent qualification by a university recognised by the University of Fribourg.

Before applying for a doctorate the candidate should contact a professor who would be willing to supervise the thesis work.

There is no general right to be admitted to a doctorate.

The respective conditions of admission for each doctoral study programme are reserved.
