Mathematics

Degree conferred
Master of Science in Mathematics

Languages of study
Study in French, German and English

Commencement of studies
Commencement of studies in the Autumn Semester (September) or in the Spring Semester (February)

Access to further studies
Ph.D.

The study programme provides a high-level education in pure and applied mathematics and involves individualized curricula specializing in several domains of analysis, algebra and geometry, topology, statistics, numerical analysis or biomathematics. Previous course work can be extended in computer science, physics or economics. Master's level classes at the nearby universities of Bern and Neuchâtel are open to students registered at Fribourg and can be part of their curriculum. Activities from the "Swiss Doctoral Program in Mathematics" can equally be integrated into the course of study.

Profile of the study programme
The study programme in mathematics provides a high-level education in pure and applied mathematics. It is open to candidates holding a Bachelor's degree in mathematics, and to well prepared and talented candidates with an equivalent degree. Because of the increasing use of advanced mathematical methods in a wide variety of fields, the study programme leads to a multitude of careers in private companies, government institutions, or teaching. Mathematicians generally have excellent prospects on the national and international job market. This Master's degree also provides the necessary preparation for students planning to follow a Doctoral programme in mathematics.

This Master offers advanced classes in a broad spectrum of mathematical areas. Students follow highly individualized curricula specializing in several domains of analysis, algebra and geometry, topology, statistics, numerical analysis or biomathematics. It is also possible to extend previous course work in computer science, physics or economics at the Master's level. Lectures and seminars introduce students to the world of mathematical research. The study programme culminates in a Master's thesis carried out under the supervision of a thesis advisor, and a final presentation of the results.

Organisation des études
Structure of studies
90 ECTS credits, 3 semesters

Admission
Master's degree programmes are built on the knowledge and abilities that were acquired when obtaining a Bachelor's degree.

Holders of a Bachelor's degree awarded from a Swiss university can be admitted to a Master's degree programme within the corresponding discipline (requires the acquisition of minimum 60 ECTS credits at Bachelor level in the corresponding discipline) without any additional requirements. The same applies to holders of a Bachelor's degree awarded by a foreign university, provided that the Bachelor's degree is recognised and considered equivalent by the University of Fribourg.

Holders of a Bachelor's degree awarded from a Swiss university or holders of a Bachelor's degree awarded by a foreign university, provided that the Bachelor's degree is recognised and considered equivalent by the University of Fribourg, can be admitted to a Master's degree programme within another discipline with prerequisites (must be successfully completed before starting the Master's degree programme) or additional requirements (can be completed during the Master's degree programme). According to existing agreements, holders of a Bachelor's degree awarded from a Swiss university of applied sciences can also be admitted with prerequisites or additional requirements.

The respective conditions of admission for each Master's degree programme are reserved.

Alternatives
Also offered as a minor study programme (30 ECTS credits).
