Environmental Sciences and Humanities

Degree conferred
Master of Science in Environmental Sciences and Humanities

Languages of study
Study in English, French and German

Commencement of studies
Commencement of studies in the Autumn Semester (September) or in the Spring Semester (February)

Access to further studies
Ph.D.

Profile of the study programme

The master programme Environmental Sciences and Humanities educates generalists in environmental sciences with a special competence in the environmental humanities and ethics. All modules consist of course units providing more general overviews or introductions to the fields of studies and allow for specialisations in specific fields of environmental sciences and humanities. The programme is based on an interfaculty and a humanistic approach. Within this highly interdisciplinary setting, students achieve key competences in all fields of the environmental sciences ranging from biology, geosciences to economic thinking in the context of sustainability; geography; ecology and biological evolution; and theory of earth sciences, human and physical geography.

Structure of lectures and courses

In conjunction with the courses from the humanities and theology module the environmental humanities module aims at building in-depth competences in humanist approaches to environmental challenges while a special focus lies on ethics and ethical decision-making. The other four modules provide the necessary generalist background to understand the basic scientific, economic and legal aspects of the environmental issues to be governed today. Depending on their prerequisites, students follow more advanced or more basic courses. The master thesis allows a specialisation on the ethical aspects of the chosen field of research.

Skills acquired and career opportunities

Students of this master programme develop and strengthen their capacities of analytical thinking, precise reasoning and detecting the ethical implications of environmental practice. In addition, they acquire general scientific, economic and legal knowledge concerning the environmental challenges of today and specialise in the context of their master thesis. Studying at the multi-lingual University of Fribourg allows to gain language competences in English, French and German. However, most of the courses are taught in English.

The master programme Environmental Sciences and Humanities qualifies for further research in the fields of environmental sciences and humanities, especially applied ethics and philosophy. Job opportunities include the fields of environmental administration and public institutions (local, national, regional, and international), urban and regional planning, environmental consulting, sustainable development, and NGOs with a focus on the environment.

Studies organisation

Structure of studies

120 ECTS credits, 4 semesters

Curriculum

Admission

Master's degree programmes are built on the knowledge and abilities that were acquired when obtaining a bachelor's degree.

Holders of a bachelor's degree awarded by a Swiss university are admitted to a master's degree programme without any preconditions if they have earned 60 or 90 ECTS credits – depending on the chosen master's degree programme – within the corresponding discipline. However, additional requirements can be required. The same applies to holders of a bachelor's degree awarded by a foreign university, provided that the bachelor's degree is recognised and considered equivalent by the University of Fribourg.

Holders of a bachelor's degree awarded by a Swiss or a foreign university, provided that the bachelor's degree is recognised and considered equivalent by the University of Fribourg, who do not fulfill this condition can be admitted to a master's degree programme with preconditions (which must be successfully completed before starting the master's degree programme) and/or additional requirements (which can be completed during the master's degree programme). The preconditions and/or additional requirements may not exceed 60 ECTS credits in total. The same applies to holders of a bachelor's degree awarded by a Swiss university of applied sciences, according to existing agreements.

The respective conditions of admission for each master's degree programme are reserved.

Alternatives

Also offered as a minor study programme (30 ECTS credits).
